

Jhorro Productions Brand Guide

Oct 7, 2026 · @Jhorro

The Jhorro Productions identity is the Watcher: a keyhole-shaped figure with one eye, cut out of a red diamond that dissolves into stripes. This guide sets out how to use it so it looks the same everywhere.

1. The logo

The logo has six versions, all built from one master drawing, so the parts are identical in every file. The **stacked** logo is the primary version. Use it whenever the space allows.

Version	Use it for	Folder
Stacked (primary)	The default. Profile pictures, splash screens, posters, merch, business cards	01-logo/stacked
Stacked + slogan	Ceremonial moments with room to breathe: splash screens, end credits, trailers, posters. Never the default	01-logo/stacked-slogan

Version	Use it for	Folder
Horizontal	Wide, short spaces: website header, banners, email signature, game credits	01-logo/horizontal
Symbol	On its own, where the name is already nearby or space is tight: app icon, card back, watermark, avatar	01-logo/symbol
Symbol tiles	The symbol set on a solid square: profile pictures, stickers, merch, app and store icons	01-logo/symbol-tiles
Wordmark	Only when the symbol already appears on the same surface	01-logo/wordmark

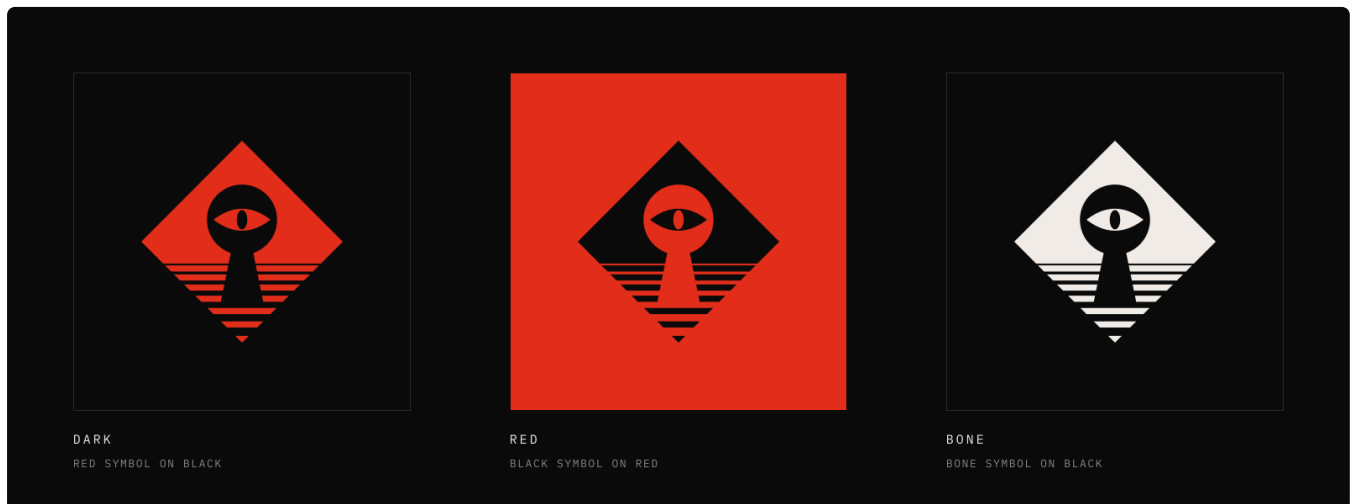

Each version comes in five color treatments. Pick the one that matches the background.

Treatment	Colors	Use on
dark	Red symbol and rules, bone text	Ink or any dark background. The house style
light	Red symbol and rules, ink text	Bone, white or any light background
bone	All bone	Dark photos and single-color work on dark (embroidery, foil)
black	All ink	Single-color print, stamps, engraving, fax-grade documents
red	All red	Single-color print on light stock

The symbol also has a **white** version (pure #FFFFFF) for places that need true white, such as video overlays.

File formats. Use the SVG whenever the software accepts it. It is the master and scales to any size. The PNGs have transparent backgrounds and come in three widths (1000, 2000 and 4000 px; the symbol in 512 to 4096 px).

Symbol tiles

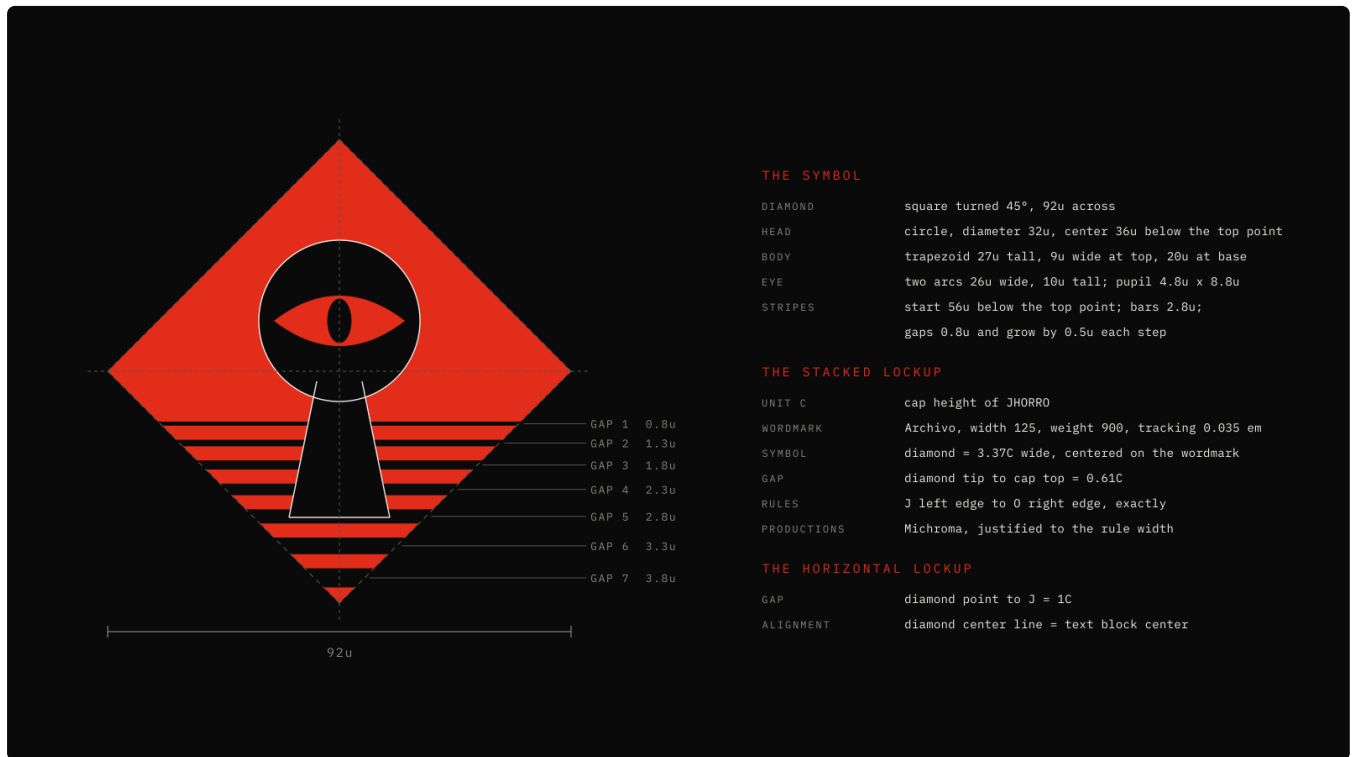

The symbol also comes set on a solid square, ready to use as a badge. The background is part of the artwork, so use the tile files as they are instead of putting a transparent symbol on a colored box by hand.

Tile	Colors	Use it for
dark	Red symbol on ink. The house style	The default profile picture, app and store icons
red	Ink symbol on Signal Red	When it should shout: stickers, posters, merch, event badges, end cards
bone	Bone symbol on ink	When it should whisper: merch, embroidery, foil, end credits

The diamond fills 60% of the tile's width, the same proportion as the profile pictures, so every tile survives a circle crop. The files are in `01-logo/symbol-tiles` as SVG, and as PNG from 512 to 4096 px. All three are also in each platform's folder in `03-social`, sized as profile pictures.

2. Construction

The symbol is drawn on a grid where the diamond measures **92 units (u)** from corner to corner. The lockups are measured in **C**, the cap height of JHORRO, so every part scales together. Don't redraw the logo from these numbers; use the master files. The numbers are here so anyone can check that a file is right.

The symbol

- **Diamond.** A square turned 45°, 92u across.
- **Head.** A circle 32u in diameter, centered on the vertical axis, 36u below the top point.
- **Body.** A trapezoid 27u tall, 9u wide where it meets the head and 20u wide at its base. It ends inside the stripes. It never touches the edges or the bottom point of the diamond.
- **Eye.** An almond made of two arcs, 26u wide and 10u tall, centered in the head. The pupil is a vertical ellipse 4.8u x 8.8u.
- **Stripes.** Seven horizontal cuts across the lower half. The first starts 56u below the top point. Every red bar is 2.8u tall. The cuts start at 0.8u and grow by 0.5u each step (0.8, 1.3, 1.8, 2.3, 2.8, 3.3, 3.8u), so the diamond dissolves toward its point.

The lockups

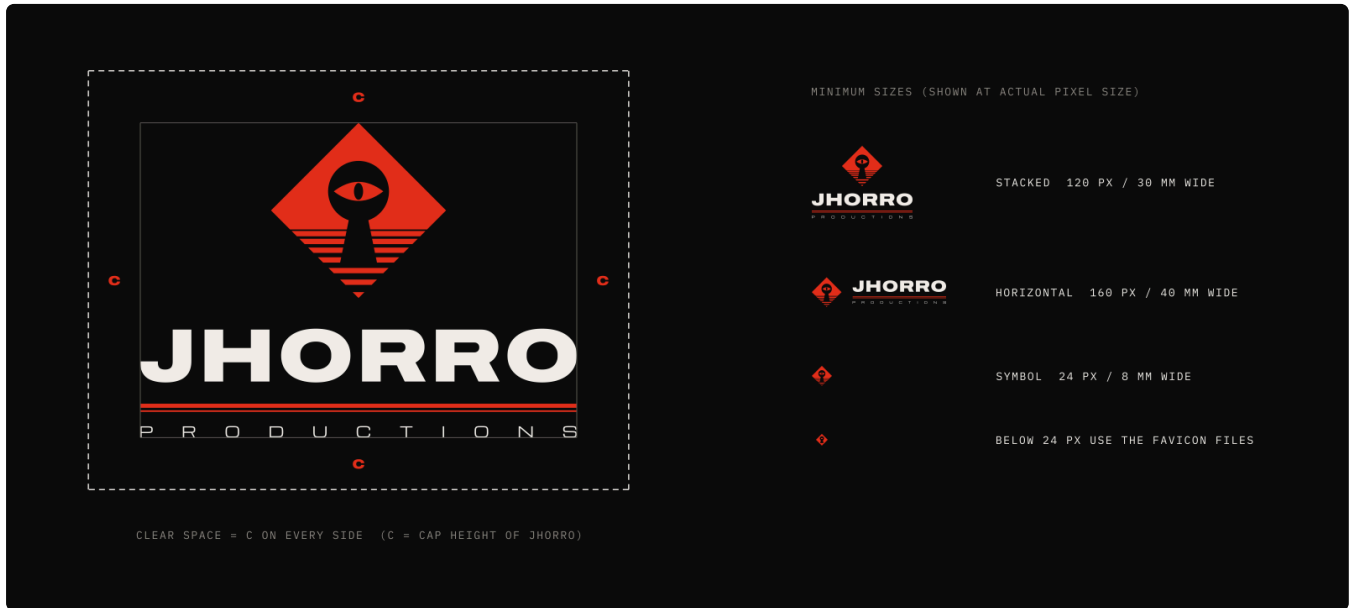

Three alignment rules hold in every lockup and every file:

1. The double rule runs exactly from the left edge of the J to the right edge of the final O.
2. PRODUCTIONS is spaced out so its letters span exactly that same width.

3. The symbol (and the slogan, when used) is centered on the wordmark. In the horizontal lockup, the diamond's widest line sits on the vertical center of the text block, from the top of JHORRO to the bottom of PRODUCTIONS.

Measurement	In C	At reference size (JHORRO set at 92 px)
C, the cap height of JHORRO	1C	63.3 px
Wordmark width, J to O	8.41C	532.0 px
Diamond width, stacked	3.37C	213.4 px
Diamond tip to top of JHORRO	0.61C	38.4 px
JHORRO baseline to thick rule	0.43C	27.0 px
Thick rule	0.079C	5 px
Space between the rules	0.047C	3 px
Thin rule	0.032C	2 px
Thin rule to top of PRODUCTIONS	0.28C	17.5 px
PRODUCTIONS font size	0.28C	18 px
PRODUCTIONS baseline to top of slogan	0.68C	42.9 px
Slogan font size (tracking 0.28 em)	0.19C	12 px
Diamond width, horizontal	2.67C	169.3 px
Gap from diamond to J, horizontal	1C	63.3 px

3. Clear space and minimum size

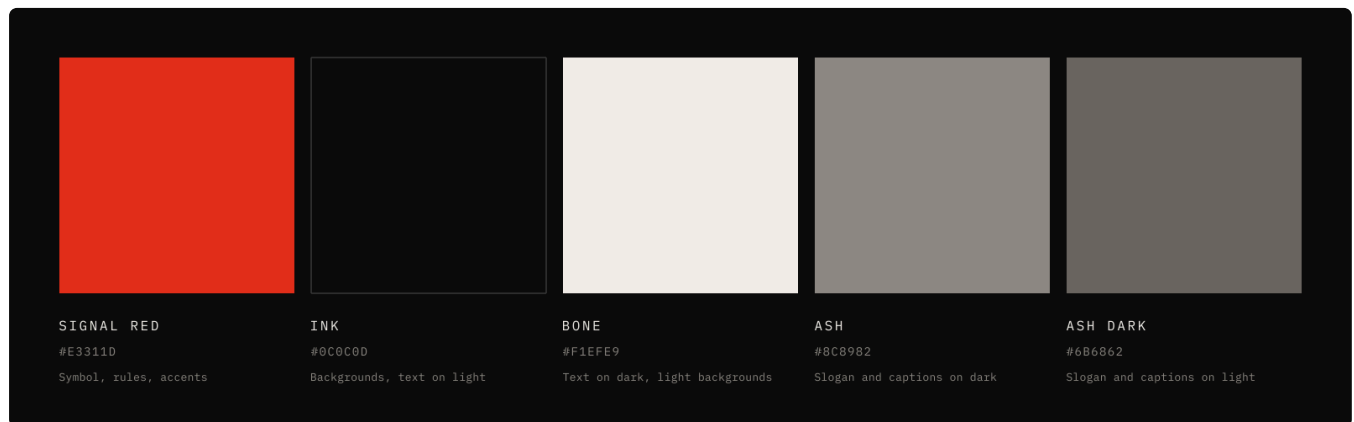

Clear space. Keep an empty zone of at least **C** (the cap height of JHORRO) on every side of any lockup. Nothing goes inside it: no text, no other logos, no frame edges, no busy parts of a photo. When the symbol is used alone, keep a quarter of the diamond's width clear on every side. More space is always fine. The one exception is the favicon at 16, 32 and 48 px, where the symbol fills its tile so it stays legible (section 8).

Minimum size. Below these sizes the stripes and the eye start to fill in.

Version	Screen	Print
Stacked	120 px wide	30 mm wide
Stacked + slogan	320 px wide	80 mm wide
Horizontal	160 px wide	40 mm wide
Symbol	24 px wide	8 mm wide
Anything smaller	Use the favicon files, which are redrawn by hand for 16, 32 and 48 px	—

At the minimum sizes PRODUCTIONS reads as a fine line of texture under JHORRO. That is expected. If PRODUCTIONS must be readable, use the logo at 300 px (75 mm) wide or more.

4. Color

Ink is the world, bone carries the words, and red is the warning signal. Keep red rare so it keeps its power: as a rough guide, about 70% ink, 20% bone and no more than 10% red on any surface.

Color	HEX	RGB	CMYK (starting point)	Role
Signal Red	#E3311D	227 49 29	0 78 87 11	Symbol, rules, accents, large headings
Ink	#0C0C0D	12 12 13	60 40 40 100 for large areas; 0 0 0 100 for small text	Backgrounds, text on light
Bone	#F1EFE9	241 239 233	0 13 5	Text on dark, light backgrounds
Ash	#8C8982	140 137 130	0 27 45	Slogan and captions on dark
Ash Dark	#6B6862	107 104 98	0 38 58	Slogan and captions on light

The screen values (HEX and RGB) are the masters. The CMYK values are straight conversions, not printer-matched. For anything printed, ask the printer for a proof and match it to Signal Red on screen. Red is where a cheap print job goes wrong first, usually toward orange or brown.

Contrast for text (WCAG 2 ratios, 4.5:1 is the minimum for body text):

Pair	Ratio	Verdict
Bone on Ink	17.0 : 1	Any text size
Ash on Ink	5.6 : 1	Body text and captions

Pair	Ratio	Verdict
Ash Dark on Bone	4.8 : 1	Body text and captions
Signal Red on Ink	4.4 : 1	Large text only (24 px or more, or 19 px bold)
Signal Red on Bone	3.9 : 1	Large text only
Ash on Bone	3.0 : 1	Avoid for text. Use Ash Dark on light backgrounds

5. Typography and font licenses

Three typefaces, each with one job.

Typeface	Settings	Job
Archivo	Expanded Black: width 125, weight 900. Tracking 0.035 em. Capitals only	JHORRO, headlines, titles on posters and trailers
Michroma	Regular. Wide tracking (0.3 em or more). Capitals only	PRODUCTIONS, subtitles, section labels
IBM Plex Mono	Regular, Medium for emphasis. Tracking 0.28 em when set in capitals	The slogan, captions, credits, small print, technical text

Archivo ships as a variable font. In design apps, pick the Expanded Black style, or set the axes to width 125 and weight 900.

The logo files are drawn as outlines, so they need no fonts installed. Never retype the logo in a font; always place the files. Where the brand fonts can't be installed (someone else's slides, plain email), fall back to Arial or Helvetica for text. Never fall back for the logo.

Font licenses

All three fonts are **free for commercial use**. They are released under the SIL Open Font License 1.1 (OFL), as stated in the font files themselves.

Font	Version	Copyright notice	License	Download
Archivo	2.001	Copyright 2020 The Archivo Project Authors (https://github.com/Omnibus-Type/Archivo)	SIL OFL 1.1	Google Fonts
Michroma	1.100	Copyright 2011 The Michroma Project Authors (https://github.com/googlefonts/Michroma-font)	SIL OFL 1.1	Google Fonts
IBM Plex Mono	2.3	Copyright © 2017 IBM Corp. with Reserved Font Name "Plex"	SIL OFL 1.1	Google Fonts

What the OFL allows

- Using the fonts in the logo and in any commercial design: posters, merch, store pages, trailers, packaging (OFL FAQ 1.1).
- Bundling the font files inside the games, for example for in-game text. You must include each font's copyright notice and the license text with the game (OFL FAQ 1.20). The file `FONTS-AND-LICENSES.txt` in the kit has all of this ready to paste into the game's credits or license folder.
- Loading the fonts on the website with `@font-face` (OFL FAQ 2.1).

What it doesn't allow

- Selling the font files on their own.
- Releasing a modified version of a font under its original name. Modified versions must stay under the OFL, and IBM reserves the name "Plex".

The kit does not include the font files. Download them from Google Fonts using the links above. This is a plain-language summary, not legal advice. The license text is what counts: it is reproduced in full in `FONTS-AND-LICENSES.txt`, and SIL's official answers to common

questions are in the [OFL FAQ](#).

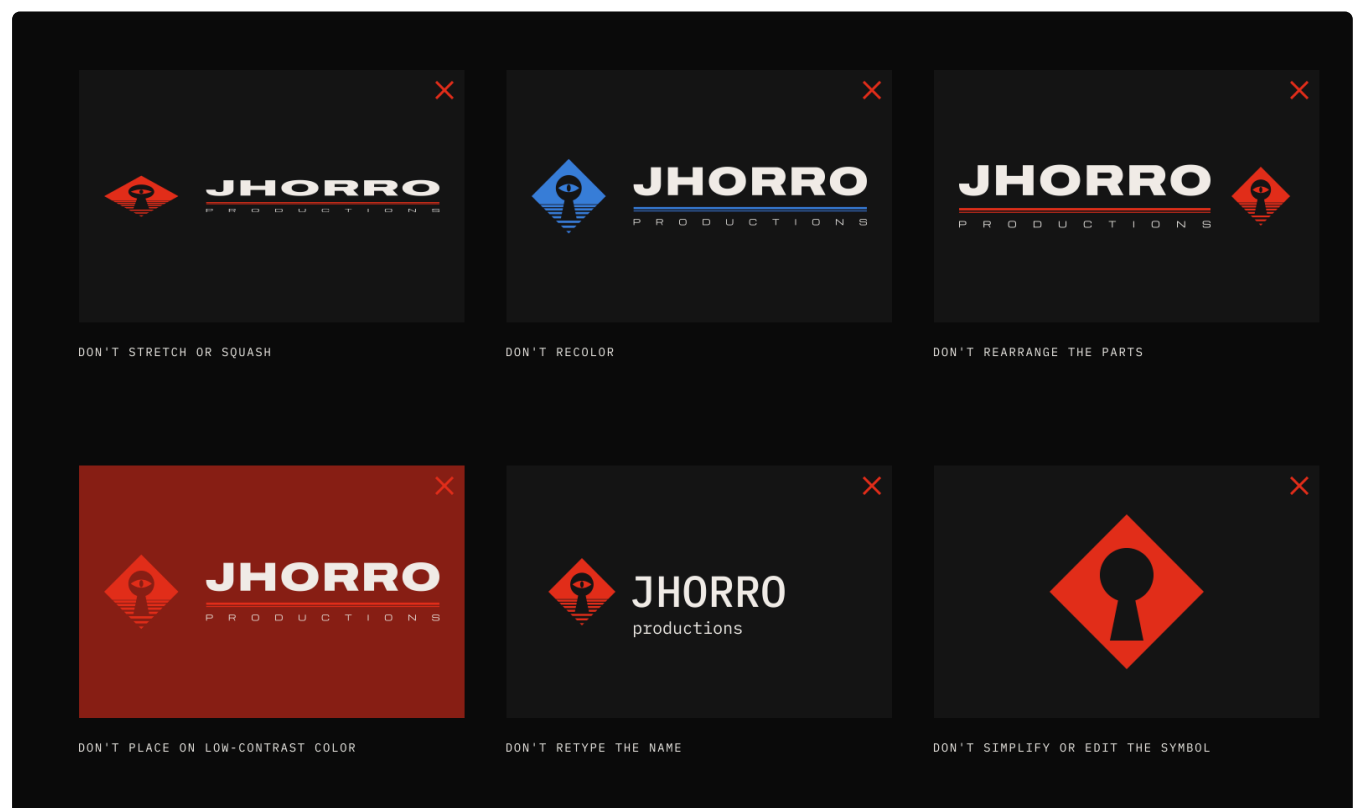

6. The slogan

YOUR ATTENTION IS APPRECIATED.

The slogan is the studio's voice: polite, corporate, and slightly too interested in you. It is not part of the logo. Use it as a signature, the last thing someone reads.

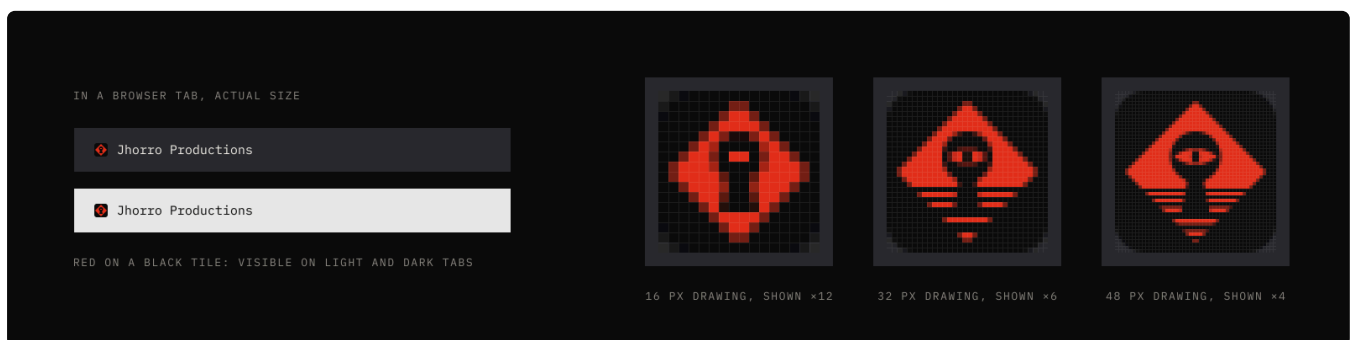

- **Always the same words.** In English, in capitals, with the period. Never shortened, reworded or translated.
- **Always the same type.** IBM Plex Mono Regular, tracking 0.28 em.
- **Always quiet.** Ash on dark backgrounds, Ash Dark on light ones. Never red, never bigger than PRODUCTIONS.
- **Use the files.** The stacked + slogan lockup has the slogan locked in place, centered under the wordmark. In wide banners it sits centered under the horizontal logo, 0.6C below it, exactly as in the `-slogan` banner files.
- **Where it belongs.** Splash screens, the end of trailers, end credits, the website footer, posters, merch tags, the back of business cards.
- **Where it doesn't.** Profile pictures, favicons, app icons, watermarks, or any logo smaller than 320 px (80 mm) wide.

7. Don'ts

- **Don't stretch or squash it.** Scale it proportionally only (hold Shift while resizing).
- **Don't recolor it.** Use one of the five color treatments in the kit, nothing else.
- **Don't rearrange the parts.** The symbol sits above the wordmark (stacked) or to its left (horizontal). Never to the right, never below, never resized relative to the text.
- **Don't put it on low-contrast color.** On a red background, use the bone or black one-color version. On a busy photo, darken the photo first or use a solid ink panel.
- **Don't retype the name.** JHORRO and PRODUCTIONS are artwork. Always place the files.
- **Don't simplify or edit the symbol.** Keep the eye, the head, the body and all seven stripes, even at small sizes. Below 24 px, use the favicon files.
- **Don't add effects.** No drop shadows, glows, outlines, bevels, gradients or textures on the logo itself.
- **Don't rotate or tilt it,** and don't put it inside another shape or frame. The icon tiles in the kit are the only exception.

8. Favicon and app icons

The favicon is the red symbol on a rounded black tile, so it stands out on light and dark browser tabs alike. A scaled-down symbol turns to mush at these sizes, so each small size is drawn by hand on the pixel grid:

- **16 px.** Diamond, head, body and the eye as a single bright dot. The stripes are left out; at this size they would only blur the diamond.
- **32 px.** Adds the almond eye and four of the stripe cuts.
- **48 px.** Six cuts and the full eye.

From 64 px up, the icons use the real symbol.

File	Size	Used by
favicon.ico	16, 32 and 48 px in one file	Every browser, including old ones

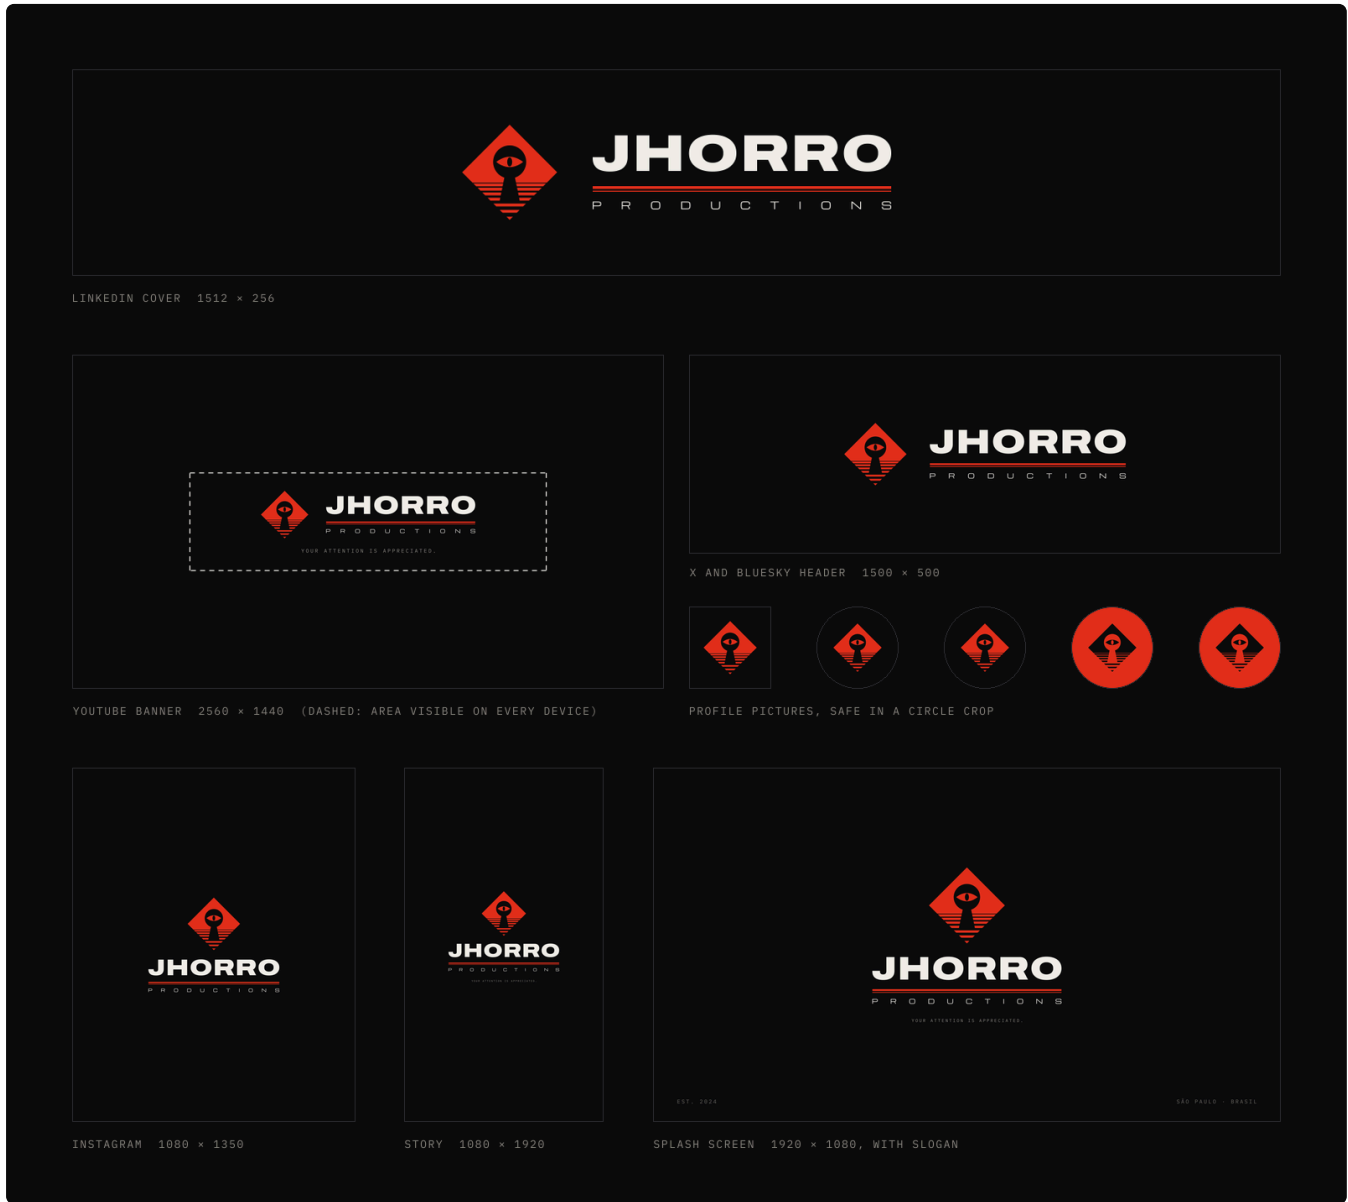

File	Size	Used by
favicon.svg	Scalable	Modern browsers
favicon-16.png , -32 , -48	16, 32, 48 px	Anywhere that asks for a PNG favicon
apple-touch-icon.png	180 × 180	iPhone and iPad home screens
icon-192.png , icon- 512.png	192, 512 px	Android home screens, installed web apps
icon-maskable-512.png	512 px	Android adaptive icons (the symbol sits inside the safe circle)
site.webmanifest	—	Ties the Android icons and the theme color together

To install on the website, copy everything in 02-favicon to the root folder of the site (next to the home page), then put these lines inside `<head>` on every page, replacing any older icon links:

```
<link rel="icon" href="/favicon.ico" sizes="32x32">
<link rel="icon" href="/favicon.svg" type="image/svg+xml">
<link rel="apple-touch-icon" href="/apple-touch-icon.png">
<link rel="manifest" href="/site.webmanifest">
<meta name="theme-color" content="#0C0C0D">
```

The same snippet is in 02-favicon/favicon-snippet.html . Browsers cache favicons hard, so after uploading, check in a private window.

9. Social media and splash screens

Every banner, post and splash screen comes in two versions: logo only, and logo with the slogan (file names ending in `-slogan`). The logo is the same size in both. Profile pictures come in the three tile colors: `dark` (red symbol on ink), `red` (ink symbol on red) and `bone` (bone symbol on ink). Pick one and use it on every platform, so people recognize the account at a glance. Each logo is placed inside the area the platform never covers or crops, and its edges are snapped to whole pixels so the rules stay crisp.

Platform	File	Size (px)	Placement
LinkedIn	Page logo	400 × 400	Symbol at 66% of the width
LinkedIn	Cover	1512 × 256	Centered, clear of the page logo, which overlaps the lower left

Platform	File	Size (px)	Placement
LinkedIn	Life tab main image	1128 × 376	Centered
LinkedIn	Custom module	502 × 282	Horizontal logo, centered. The stacked logo with slogan can't reach its 320 px minimum here
LinkedIn	Company photo	900 × 600	Centered
YouTube	Channel banner	2560 × 1440	Inside the 1546 × 423 area that every device shows
YouTube	Profile picture	800 × 800	Safe in the circle crop
YouTube	Video watermark	150 × 150, transparent	The symbol; upload in YouTube Studio under Customization, Branding
X	Header	1500 × 500	Inside the middle band, clear of top and bottom crops and of the profile picture
X	Profile picture	400 × 400	Safe in the circle crop
Bluesky	Banner	1500 × 500	Same placement as X
Bluesky	Avatar	400 × 400	Safe in the circle crop
Instagram	Profile picture	1080 × 1080	Safe in the circle crop
Instagram	Square post	1080 × 1080	Centered
Instagram	Portrait post	1080 × 1350	Centered, so it survives the cropped preview on the profile grid
Instagram	Story	1080 × 1920	Clear of the top 250 px (account name) and bottom 340 px (reply bar)

Splash screens (04-splash) carry the stacked logo at the center, with "EST. 2024" in the lower left and "SÃO PAULO · BRASIL" in the lower right, set in IBM Plex Mono.

File	Size (px)	Use it for
jhorro-splash-1920x1080	1920 × 1080	Game boot screen at Full HD, trailer end cards, stream screens
jhorro-splash-2560x1440	2560 × 1440	Boot screen at 1440p, desktop wallpaper

File	Size (px)	Use it for
jhorro-splash-3840x2160	3840 × 2160	Boot screen at 4K, video masters
jhorro-splash-steam-deck-1280x800	1280 × 800	Steam Deck (16:10)

In a game, show the splash at the screen's native resolution. Don't stretch a 16:9 file to fit a 16:10 screen; use the Steam Deck file. All files are PNG, well under every platform's size limit (the largest is 82 KB).

10. Files in the kit

```
jhorro-brand-kit/
├─ README.txt           what is where, on one page
├─ FONTS-AND-LICENSES.txt font credits, full OFL 1.1 text

├─ 01-logo/
│   ├── stacked/        svg + png (1000, 2000, 4000 px)
│   ├── stacked-slogan/  svg + png
│   ├── horizontal/      svg + png
│   ├── wordmark/        svg + png
│   ├── symbol/          svg + png (512 to 4096 px)
│   └─ symbol-tiles/     svg + png (512 to 4096 px)
├─ 02-favicon/          favicons, app icons, manifest
├─ 03-social/          one folder per platform
└─ 04-splash/           Full HD, 1440p, 4K, Steam Deck
```

Logo files are named `jhorro-<version>-<treatment>`, plus the width for PNGs. For example, `jhorro-stacked-dark.svg` or `jhorro-horizontal-light-2000.png`.

How the files were checked. Every file is generated from one master drawing, so nothing is traced or placed by eye. A separate check then measured the delivered files, not the drawing, against every rule in this guide:

- **Logos.** In the SVGs the largest deviation from any rule in section 2 is 0.00004C, which is the rounding of coordinates to four decimals. In the 4000 px PNGs it is 0.03 px. Every PNG matches its SVG.
- **Banners, posts and splash screens.** Every logo keeps at least C of clear space inside the area the platform shows, meets the minimum sizes in section 3, and is centered to within half a pixel. The ends and the top edge of the thick rule land exactly on whole pixels, so the rules stay sharp. The logo is the same size in the plain and `-slogan` versions.

- **Profile pictures, symbol tiles and app icons.** The symbol is centered to the pixel, with at least a quarter of the diamond's width clear on every side.
